THE BIGGEST & BEST SELECTION OF SHORTHORN SEMEN AVAILABLE IN THE UK

Shorthorn
SIRES UK

CATALOGUE DECEMBER 2021

www.shorthornsiresuk.co.uk

Shorthorn Sires UK Ltd

The Company was formed by the Council of the Shorthorn Society of the United Kingdom and Ireland in order to source and supply semen from the very best proven and young Sires and to meet the need of members and others interested in Shorthorns.

Shorthorn Sires UK has the best selection of Red Genetics as all the Sires are selected for their superior standards of production, type and index. The Sires offered in this catalogue include Pure Shorthorns and Blended Shorthorns for both Dairy and Beef.

CROSS BREEDING

Shorthorn Breeders have been cross breeding for the last 40 years, so it is a tried and tested way of improving your stock, giving increased fertility with excellent mobility and longevity in commercial herds.

The stars which you will see within the brochure are part of the Star Brood Award Scheme which benchmarks a Shorthorn cow on her ability to produce consistent yields combined with fertility, longevity, type and successfully transmitting these traits through to her progeny. Stars are awarded for gaining milk diplomas which incorporates constant production with regular breeding. A star is also awarded when a cow reaches a lifetime yield of 50,000kgs, 75,000kgs and two stars for 100,000kgs. Every time a cow is classified excellent and any progeny that achieves an excellent classification a star is also awarded.

Shorthorn Sires UK abides by the AHDB Dairy and Holstein UK established code of Advertising. All dairy genetic information used in this catalogue is the most recent available information obtained from AHDB Dairy, published December 2021 using the Dairy Shorthorn genetic reference base.

SELECTION CRITERIA FOR SHORTHORN SIRES UK LTD

Shorthorn Sires UK Ltd was established to provide top class Dairy Shorthorn genetics for use in the dairy herd. The Directors meet 3 times a year to consider any prospective young Sires which may be suitable for semen collection. The minimum selection criteria are that the dam has to be classified VG or EX and have at least one production index of 110 or greater. The bull himself is also inspected by the Directors to ensure he is of suitable conformation. Other factors such as butterfat and protein percentage, genetic indexes of parents, and pedigree are all considered before a bull is accepted for collection by SSUK. The stringent selection process has proved to be an extremely reliable measure of a young bull's expected genetic potential.

Shorthorn Sires UK also markets semen on behalf of Dairy Shorthorn Society members and these are listed as members Sires. These Sires are not selected by SSUK Directors and the information available for these Sires is as published in the catalogue.

Shorthorn Sires UK Ltd also markets Beef Shorthorn semen along similar lines and Beef Shorthorn Sires can be found at the back of the brochure, the majority of which are marketed on behalf of Beef Shorthorn Society members.

WOODHEAD BROS

Morrisons FARMING

ASSURED FOOD STANDARDS

Woodhead Brothers is one of the largest meat processors in Europe, with 3 abattoirs in the UK processing cattle, sheep and pigs. If you would like to become a supplier, please contact the Livestock Office on 01282 729150.

Morrisons Beef Shorthorn Scheme

We are actively seeking new farmers to join our producer groups. 'The Best' Shorthorn Beef range, is exclusively for Shorthorn sired heifers and steers under 30 months of age. Cattle weighing 270 to 400kg deadweight, grading O+ to –U, fat class 3 – 4L are eligible for premiums of up to **30p/kg on top of the weekly base price.**

For more information on the Morrisons Beef Shorthorn Scheme, please contact Jessica Tomley, Livestock Buyer 07814 075468 or jessica.tomley@morrisonsplc.co.uk.

BEEF SHORTHORN

Morrisons Dairy Beef Scheme

Britain's most integrated beef supply chain, in partnership with Buitelaar International. Morrisons offer consistent, high quality Continental dairy bred calves throughout the year, including an available finance package with an underwritten price.

If you would like to know more and how it could work for you, please contact Alex Nutter on 07790 359879 or email alexandria.nutter@morrisonsplc.co.uk.

Morrisons promote Shorthorn Beef in their stores and require more beef to meet demand, there is a 25p/kg premium for animals sired by a Beef Shorthorn Bull that hit the required grade. Shorthorn Sires UK market Sires especially selected by Morrisons for their superior beef shape and easy calving attributes. Because Morrisons are subsidising this scheme Shorthorn Sires UK can offer high quality semen at extremely reasonable rates, with minimum orders of 50 straws, it is being sold on a first come first serve basis as we are not sure how long the offer will last.
There is a definite opportunity for many commercial dairy herds to make use of this offer and potential premium.

Morrisons selected Beef Bull is currently CHAPELTON PROMOTER

SEXED SEMEN QUICK TIPS

Selecting the correct animal

Sexed semen was initially designed for use on maiden heifers but over the past few years it has proven extremely successful when used on cows. It is essential when selecting cows to serve to sexed semen that she is good condition and has good fertility history. Cows that have had mastitis, held cleansings, are lameness or bad health should not be served with sexed semen.

Sexed semen is not recommended for use with synchronisation programmes where heifers or cows are bred using fixed time insemination.

Nutrition

From at least a month before the service period the aim is to get heifers & cows settled, stress free condition.
Cows milking heavily and losing condition are less likely to get in calf. Settle the animals onto a consistent diet, nutritionally balanced for energy, protein and minerals preferably on a rising plane of nutrition.
Do not make diet changes for one month before or after the service period.

Heat Detection

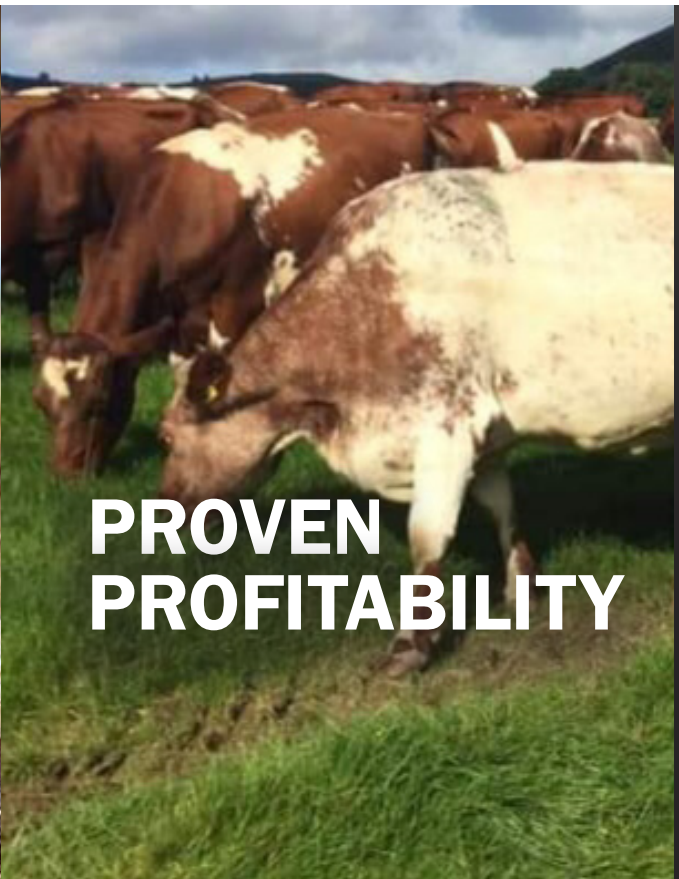
Heifers should be moved into easily handled groups. Large groups can be difficult to handle and can cause stress. This also makes it easier to spot heats.
Observing heats is very important and we suggest the it is done 3 times a day for 15 minutes .Results have shown for best conception rates serving 12 hours after the onset of a standing heat. Insemination should be as stress free as possible for the animal

Handling Sexed Semen

Attention to detail is essential when handling sexed semen.

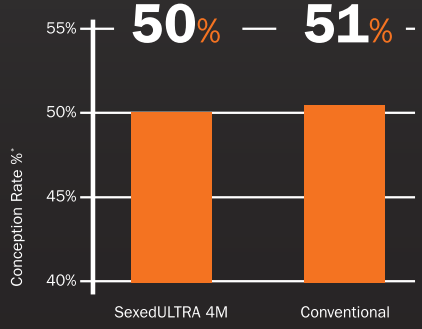
Use tweezers, never fingers to handle straws.	Never take out an individual straw to look at and then put back. It will almost certainly damage the sperm.	Check the temperature of the water in your thawing device with a thermometer.	Flick the straw to remove any trapped nitrogen.
Thaw the straw straight away at 37°C for 40 seconds	Thoroughly dry the straw, water kills sperm.	Use clean straw cutters, or sharp scissors to cut off the sealed end.	Once thawed don't let the straw cool down again.
Pre-warm the AI equipment and keep it insulated until the insemination (especially in cold weather)	Animals should be inseminated within 5 minutes of removing from the tank.	Once thawed, straws cannot be re-frozen.	Do not split straws.

Information sourced form Cogent breeding.



SexedULTRA 4M

The UK's most advanced sexed semen, SexedULTRA 4M® has now been proven by UK farmers as a highly fertile sexed product, comparable to conventional semen across the country on many different systems and herd sizes.



Data derived from 73,370 inseminations in 164 UK herds*
